Cantilever Racking

Store Any Size, Any Shape

Indoor Storage

Cantilever Racking

Versatile and extremely durable, take the headache out of storing long, short or awkwardly-shaped items with a Cogan cantilever rack system.

Designed for outstanding versatility, our cantilever racks use a special arm system that allows for

easy front loading without any obstruction. From tubing and piping to plywood, drywall, and steel sheets, any application that requires extra-wide front loading is an ideal situation for our cantilever racks. Structural steel components provide superior strength and durability, while a painted or optional galvanized finish makes our cantilever racking the perfect candidate for indoor and outdoor use. Arms can be adjusted vertically up to four inches to optimize stacking.

Very Narrow Aisle

Cantilever Racking

Make the most out of your storage or picking area with Cogan very narrow aisle (VNA) cantilever racking.

Designed for use with side loader fork trucks, our VNA cantilever rack system maximizes storage capacity for a highly efficient use of floorspace. The narrow design means Cogan VNA cantilever racking uses as little as half the normal aisle width of standard racking solutions. Your storage capacity doubles and wasted space is eliminated. This is ideal for high-density storage areas or where there is a need for expansion within an existing facility.

Mobile

Cantilever Racking

When warehouse space is limited, increase the capacity of available storage with mobile cantilever racking.

Fitted on wheeled bases integrated with motorized controls, mobile cantilever racking runs along rails set into the floor. Fixed aisles are eliminated and replaced with a single 'floating aisle' to access stored materials. This drastically compacts surface area, allowing you to double your storage space without adding a single square foot to your facility. Contribute to a more sustainable work environment that optimizes space, reduces energy consumption and most importantly, keeps your inventory secure.

Lumberyard

Cantilever Racking

No matter your yard plan, Cogan cantilever racks are the most efficient way to store lumber, sawn wood, and engineered wood products.

The absence of obstructions at the pick face allow our cantilever racks to manage high-density loads

of varying length and cubic proportions. Wood planks, beams, posts, poles, or joists, the robust structural components can easily support a multitude of bulk storage items. A painted or durable galvanized finish makes Cogan cantilever racks ideal for indoor or outdoor use. Add a custom roof system to create a fully sheltered L-shed or T-shed. Protection from the elements means your material will not warp or deteriorate from harsh weather conditions.

Guard against snow, ice, rain and sun damage. Create a 4-season covered covered storage unit with Cogan cantilever L-Sheds and T-Sheds.

Ideal for protecting stored materials from harsh weather conditions, the angled roof design allows

rain to flow down easily and shields against snow, ice and sun damage. Structural steel components and heavy-duty treated wood joists provide superior strength and durability. An optional galvanized finish is also available for extra wear-resistance. In order to account for local weather variances, Cogan cantilever roofs are always custom-manufactured for your specific system. Available in single (L-shed) and double-sided (T-shed) configurations.

4-Season Storage

Cantilever Racking

Construction

Cantilever Racking

Rugged and resilient, Cogan cantilever racking is built strong to handle your toughest construction jobs.

Wind, rain, snow and ice are no match for Cogan cantilever racking. Built for outstanding durability, structural steel components ensure your racking system will remain stable and secure under all types of harsh weather and site conditions. Ideal for outdoor construction storage, the barrier-free design allows for the easy storage of wood beams, plywood, and any type of building material. Items are clearly sorted and kept off the ground for fast access and inventory control.

Standard Colors

Standard colors are applied to all products and are automatically included in the material price on your quote. Unless otherwise specified, all standard colors are powder-coated for a durable, long-lasting and maintenance-free paint finish.
